

Eric Mobley

Eric Mobley is an energy engineer for Sain Engineering Associates, Inc (SEA) where he provides energy consulting services to both private and federal clients. Eric started his career at SEA after graduating from the University of Alabama at Birmingham with a Bachelor's Degree in Electrical and Computer Engineering. He would later receive a Master's Degree in Engineering with a concentration in Information Engineering and Management. He also is a licensed Certified Energy Manager (CEM) through the Association of Energy Engineers (AEE).

Presentation

SEA has developed a methodology that results in big savings for owners by performing a special form of retro-commissioning called building tune-ups. Building tune-ups focus on saving money through 'tuning' the existing equipment and how it operates in a building rather than focusing on providing new equipment and upgrades. This presentation will explore the synergies between building tune-ups and retro-commissioning and provide insight, using case studies, into why this is a valuable tool in an owner's toolbox.
